

the DVD, not in the memory 8, for example, if T_MENU item or MENU item is selected, data related to the request, e.g., a list of titles or chapters, are read out from the DVD and are then displayed on the displaying unit 4 after an appropriate format
5 conversion.

Accordingly, the present invention enables a user of a digital apparatus like a digital television to conveniently request and execute various operations or functions of external digital devices that are connected to the digital apparatus
10 without the direct control of or access to the external digital devices.

The foregoing is provided only for the purpose of illustration and explanation of the preferred embodiments of the present invention, so changes, variations and
15 modifications may be made without departing from the spirit and scope of the invention.
